

Dear FCC,
I am a huge supporter of XM radio and especially their traffic and weather reporting. XM Radio has completely transformed my driving experience. I tell people XM is the best invention since toilet paper. That's how much I love XM!

Do not allow any monopolization or censorship to occur in our free market.

Am and Fm stations need to simply provide better products and compete instead of lobbying politicians to push xm radio's censorship. The very basics of the free market ideology is for a superior product to become available out of the competition amongst the suppliers. The status quo, which is what am and fm stations want, will only promote stagnation. Have them step up to the challenge of providing the best product for the buyer.

Thank you for your attention.

Jose Jesus Caballero
